--	---

Activities Performed:

START performed contractor monitoring accompanied by written and photo documentation for all activities conducted by the ERRS contractor. These activities included; the removal of PCB contaminated debris, removal of scrap meta, abatement of friable and non-friable asbestos, the decontamination of PCB contaminated hydraulic presses, sumps and floors of building, and the filling of sumps with gravel and concrete. START performed air monitoring with the OVA, HNU, and miniram whenever necessary. START maintained records of all manifests for shipments arriving and departing from site and all air monitoring results received from subcontractors. START assisted ERRS with sampling activities and health and safety issues. START also prepared draft PolReps and maintained site files.
